

READ 80 TEXTMAPPING: Middlebrook Scroll Map

The scroll is a hands-on introduction to the structure of informational text. Students become acquainted with the features of the text and can experience a book in an atypical format.

Procedure:

Create groups of 4 or 5 students each

Give each group the same photocopied chapter from a pre-collegiate college text such as a writing or math text

Tape the pages of the chapter together, in numerical order, left to right, to create a horizontal scroll

Give each group a set of highlighters with 4 different colors and have the students mark the scroll as follows

- YELLOW: chapter title - everywhere it is located
- ORANGE: subsection/objectives through chapter
- PINK: important words and terms
- BLUE: exercises

Have the groups reflect on what they have discovered about textbook structure.

Some prompting questions are

- Where did you find the chapter title?
- How did you determine objectives?
- To evaluate the exercises: (use four levels of comp)
 - What are the levels of questions being asked. What kind of question is typical?
 - use BLUE to locate where answers to exercises are found
- Summarize how the chapter is organized i.e. what are the structural elements that are found in a textbook - group mini-presentations

Each student does own reflection

- What did this process show you about how the textbook is structured?
